Pallet truck in painted steel

Our pallet trucks are fitted with either smooth-running, light-duty nylon or silent polyurethane wheels. Both models have a simple and stable hydraulic system with built-in automatic release valve. The pallet trucks can be tailored to the data below the product details.

The pallet truck is lightweight and easy to maneuver

The pallet truck's fork noses are sturdy and rounded. The construction of the tow bar is strong and tapered. The ergonomic design of the tow bar makes the pallet truck easy to operate. The lower handle is integrated into the tow bar, which is also used to lift the carriage. The lowering lever controls the lowering valve and lowering speed, which will be proportional to the movement of the lowering lever. When the tow bar is released, it will automatically return to its initial position.

Options

- Minimum fork length: 400 mm
- Maximum fork length: 3000 mm
