

# PALLET TRUCK - PAINTED

OA/115

## Pallet truck - Painted

Our pallet trucks are fitted with either light-running nylon or silent poly wheels. Both models have a simple and stable hydraulic system with built-in automatic release valve. The pallet trucks can be tailored to the data below the product details.

The pallet truck has sturdy rounded fork noses. The construction of the tow bar is strong and tapered. The ergonomic design of the tow bar makes the pallet truck easy to operate. The lower handle is integrated into the tow bar, which is also used to lift the carriage. The lowering lever controls the lowering valve and lowering speed, which will be proportional to the movement of the lowering lever. When the tow bar is released, it will automatically return to its initial position.

The pallet truck is lightweight and easy to maneuver.
